Abstract

The Heavy Metal Tested & Certified standard for Herbs, spices, and dried seasonings (turmeric, cinnamon, paprika, chili powder, pepper) (Herbs, Spices, Seasonings and Salt), stated as sold. Each analyte carries the strictest applicable government maximum level in the product's native basis, with a disclosed read-across or a mandatory control where no government regulates the exact product.

1 | How every number on this standard is set

HMTc Method v2.0 (government-limit default; explicit-id lookup; legislated product-form splits preserved; dried-spice basis discipline)

2 | Master limit table

All values in ppb (µg/kg), as sold basis. A brand meeting every value qualifies for the mark.

ANALYTE	HMTC LIMIT	BASIS
Lead (Pb)	600	strictest government ML, set by product form
Cadmium (Cd)	1,000	government maximum level (Vietnam)

Total arsenic (tAs)	1,500	government maximum level (Singapore)
Inorganic arsenic (iAs)	—	—
Mercury, total (tHg)	50	government maximum level (Vietnam)
Methylmercury (MeHg)	n/m	not material in this matrix
Nickel (Ni)	—	—
Tin (Sn)	—	—
Aluminium (Al)	n/m	not material in this matrix
Total chromium (Cr)	—	—
Hexavalent chromium (Cr-VI)	—	—

3 | Derivation — where each number comes from

Every cell traces to one named sovereign maximum level (the strictest for the nearest analog), or to an explicit control, not-material, or species-bounded determination. No occurrence statistic selects a certification value.

ANALYTE	HMTC	SOVEREIGN ANALOG / DETERMINATION
Lead (Pb)	600	strictest government ML, set by product form
Cadmium (Cd)	1,000	government maximum level (Vietnam)
Total arsenic (tAs)	1,500	government maximum level (Singapore)
Inorganic arsenic (iAs)	—	—
Mercury, total (tHg)	50	government maximum level (Vietnam)
Methylmercury (MeHg)	n/m	Methylmercury is a marine--bioaccumulation speciation with no formation pathway in a terrestrial dried spice, and it is arithmetically bounded by total mercury (MeHg <= tHg). Spice mercury is regulated as total mercury, which the tHg standard caps, bounding any organomercury fraction.
Nickel (Ni)	—	—
Tin (Sn)	—	—

Aluminium (Al)	n/m	Dried spices are natural aluminium accumulators (aluminium is taken up from soil and concentrated on drying); the aluminium present is background, not contamination. No credible regulator sets an aluminium contaminant maximum level for spices; dietary aluminium is managed by intake against the EFSA/JECFA TWI, not by a per-food ML. Matches the existing spices/Al determination in standards-not-material.csv.
Total chromium (Cr)	—	—
Hexavalent chromium (Cr-VI)	—	—

MAXIMUM LEVEL

STATUS AND LICENCE

A normative certification standard, editorially reviewed and version-controlled in-house; every value traces to a named sovereign maximum level, disclosed in the derivation. © 2026 Institute of Contaminant Standards / Heavy Metal Certified. All rights reserved.

COMPETING INTERESTS

This standard is published by the Heavy Metal Tested & Certified (HMTc) program, operated by the Institute of Contaminant Standards. Its statements about government regulations, toxicology, and occurrence are sourced to the cited primary and expert-body records and to the independently maintained Heavy Metal Index; the program's own certification thresholds are not used as evidence for any factual claim made here.

DATA AVAILABILITY

The works this standard draws on are listed in full in the references above and on the standard page at https://heavymetalcertified.com/standards/spices. Primary legal instruments and expert-body assessments are named with their public identifiers; the underlying occurrence and toxicology corpus is maintained on the Heavy Metal Index.
